

Bi-Directional Belt Discharge for 170A Merger

A different manifold for hydraulic belt motor operation is now available.

Intended Use

The new manifold is available to replace the standard manifold to allow for reversing of the primary belt direction. This allows the unit to discharge the windrow at both ends. During left discharge, the extension is inoperable.

Product Highlights

- Manifold bolts directly to the motor, replacing the original manifold.
- Extension operation is controlled by hand control at the manifold, in the same manner as the production manifold.
- No additional parts or hardware is required.

Ordering Information

Part RC063485 Manifold, Bi-directional, is compatible with all 170A Windrow Mergers.

A credit may be available for production manifolds that have not been physically used in the field. Contact RCI for more information.

Installation Time

Approximately 1/2 hour, depending on technician experience.

All parts, service and warranty matters are handled by RCI Engineering LLC.
