

## Draper Conversion Kit for SPFH

A John Deere 900D Series Draper can be installed on the 6000- or 7000-series Self-Propelled Forage Harvester to increase harvest efficiency by combining operations.

The **RC0098 Kit** available from RCI ENGINEERING LLC is used on the 6000- or 7000-series SPFH to attach to a 20 ft. or 25 ft. wide draper platform.

This kit provides sufficient oil flow from the base machine to drive the reel and also provides controls in the cab for control of draper belt speed and reel speed. The kit includes a flow divider / flow control valve and all other components necessary to adapt the draper to the quick coupler. This kit is to be used in conjunction with the BZ13724 Header Adapter bundle used to convert the hydraulic outputs of the SPFH to the multi-coupler style of the draper header.
