

Flat-Turning Spout Bundle for SPFH

A Flat-Turning Spout Bundle can be installed on the 7000 Series Self-Propelled Forage Harvesters to provide horizontal rotation of the spout for side-filling trucks.

This Bundle is available from RCI ENGINEERING LLC. The part number for the bundle is RC0125 and it will fit the 7200-7500 as well as the 7700 and 7800 SPFH.

This bundle is to be used in conjunction with AZ55314 Transition from 50-series to provide a horizontal spout travel path during rotation and to lower the height of the spout for the 7200-7500 SPFH.

This bundle is used with the production Transition for the 7700 and 7800 SPFH to provide a horizontal spout travel path during rotation.

This bundle is only to be used with the North American flat spout.

Order quantity of two (2) Z67197 Rings from John Deere to complete the installation of the bundle.

Rotation is limited to 180 degrees to prevent interference with the cab. When installed, the bundle will increase ease of operation of the machine as the spout will not have to be continually raised or lowered when filling trucks with side openings.

Note: Spout Resting Height for 7200-7500 will be approximately 4 inches lower with the new components. Spout Resting Height for 7700-7800 is nearly the same as production with the new components and the spout modification.

All warranty matters are handled by RCI ENGINEERING LLC.
