

Draper Conversion Bundle – 7050-Series SPFH with 900D-Series Draper Platform

A John Deere 900D Series Draper can be installed on the 7050-series Self-Propelled Forage Harvester to increase harvest efficiency by combining operations. This bundle provides for improved oil flow over previous generations of draper conversion bundles.

The **RC042050 Bundle** available from RCI ENGINEERING LLC is used on the 7050-series SPFH to attach to a 25 ft. or 30 ft. wide draper platform.

This bundle provides approximately 15 gallons per minute of oil flow from the base machine to drive the reel and also provides controls in the cab for control of draper belt speed and reel speed. The bundle also includes a larger oil reservoir, a flow control valve and all other components necessary to adapt the draper to the quick coupler. This kit is used alone to adapt the draper platform to the 7050-Series SPFH. No other parts are necessary in the adaptation.
