

High Capacity Hydraulic Tank for SPFH

A larger hydraulic tank can be installed on the 7050-series Self-Propelled Forage Harvester to increase tank capacity for certain applications using auxiliary hydraulic functions.

The **RC042078 Bundle** available from RCI ENGINEERING LLC is used on the 7050-Series Self-Propelled forage harvester to replace the production tank.

This bundle provides for an additional 4.5 gallons of hydraulic tank capacity over the production tank. It also provides for easier flow internally across the baffle of the tank through more open space in the baffle.

This bundle is complete for machines equipped with the John Deere Pro-Drive System. For machines not equipped with this option, also order the following from your local John Deere dealer through the John Deere parts system:

Qty 1	AZ72095	Neck, Filler
Qty 1	TY22471	Clamp, Hose
Qty 1	Z82141	Hose, Hydraulic
Qty 1	AZ72115	Line
